Digital Expression Business Requirements Document & Page Content Architecture

Not a catalogue of services. A living demonstration of how we think and what we can make happen.

INTERNAL DOCUMENT — SEPTEMBER 2026 — VERSION 2.0

THINKINGHEAD NIGERIA LIMITED

RC 8611016 · thinkingheadng@gmail.com · +234 706 834 9172

5 Pipeline Road, Bayan Dutse, Kaduna, Nigeria

Preamble: What This Document Is

This is not a website specification. It is the architectural blueprint for ThinkingHead's digital expression — a system that makes visible how we see problems, how we reason, how we build solutions, and what those solutions produce in the world.

The governing question for every page, every section, every line of copy: *"What does this page reveal about how ThinkingHead thinks?"*

If a page doesn't answer that question, it doesn't belong.

The Four Layers

The digital expression is built around four layers, each corresponding to a dimension of ThinkingHead's identity:

#	LAYER	WHAT IT MAKES VISIBLE
1	What we believe	Our worldview and principles about systems, technology, AI, organisations and Africa. This is the intellectual foundation — the lens through which we see every problem.
2	How we think	Our methodology: how we investigate problems, identify root causes, design interventions and make decisions. Not a process diagram — a way of reasoning.
3	What we have built	Case studies that demonstrate our thinking through real outcomes. Not project listings — stories of diagnosis, intervention and result.
4	What we know	Research, insights, frameworks, tools and perspectives that establish ThinkingHead as a thinking institution — not just a doing company.

The website becomes: ThinkingHead, expressed digitally — not a catalogue of services, but a living demonstration of how we think and what we can make happen.

Part A: Strategic Requirements

— A1. Brand DNA — What ThinkingHead Must Stand For

What people must think after encountering us:

“These people think before they build. They understand my problem better than I described it. They are serious, Nigerian, globally competent, and they stay until it works.”

The ThinkingHead identity markers (non-negotiable):

- 1. We are thinkers first.** Every recommendation is grounded in research, evidence and systems analysis. We do not guess. We do not follow templates. We diagnose.
- 2. We build what we recommend.** We are not a consultancy that hands over a report and leaves. We arrive with the plan and the capacity to ship it.
- 3. We are Nigerian, by design.** Not despite being Nigerian. Our context — variable power, 3G connections, cash economies, institutional complexity — is the operating reality we engineer for. It is a capability, not a limitation.
- 4. We are AI-native.** AI is not a feature we bolt on. It is how we research, model, test and deliver. When you hear a number from us, it comes from analysis you can check.
- 5. One accountable partner.** The person who scopes the work is the person who owns the outcome. No hand-offs. No vanishing acts.

What must never appear on the ThinkingHead digital presence:

- Stock photos of people in suits shaking hands or pointing at screens
- Generic tech buzzwords without evidence (“seamless”, “cutting-edge”, “world-class” used as decoration)
- Carousel sliders, auto-playing videos, or animation that delays content
- Client logos displayed without context (logo walls are credibility theatre)
- “Learn more” links that lead to empty or thin pages
- Any content that could have been written about any consulting firm anywhere
- The word “synergy”

— A2. Target Audiences

AUDIENCE	WHO	WHAT THEY NEED FROM THIS SITE
Primary	C-suite executives, board members, GMs at Nigerian enterprises, government MDAs, development organisations	Evidence that we think before we build. Proof of delivery. A fast, dignified path to a real conversation — not a sales funnel.
Secondary	Procurement officers, vendor-assessment teams at corporates, NGOs, public institutions	Company registration, capability statement, track record, downloadable corporate profile. They need to tick boxes — make it easy.
Tertiary	Startup founders, senior engineers, potential hires, technology partners	Technical credibility, intellectual depth, culture signals. “Do I want to work with / for these people?”

— A3. Business Objectives

BO-1 Demonstrate thinking, not just capability. The site must show how ThinkingHead reasons — through the way content is structured, the depth of case studies, and the presence of original thinking (insights, frameworks, perspectives). A visitor should leave knowing not just what we do, but how we see problems.

BO-2 Convert executives into conversations. Every page must have a clear, dignified path to a discovery conversation. Not a chatbot. Not a “schedule a demo.” A “Let’s talk” that respects the seniority of the visitor.

BO-3 Establish institutional credibility. Registration, leadership depth, methodology, track record, partnership model — all surfaced cleanly, not hidden in a footer. Procurement officers must find what they need in under 60 seconds.

BO-4 Publish intellectual capital. The Insights section must position ThinkingHead as a thinking institution. Research notes, frameworks, perspectives — not blog posts about “5 trends in AI.” Original work that reflects how we actually think about problems.

BO-5 Attract talent. Senior engineers and strategists must read the site and feel: “These people are doing real work. I want to be part of it.”

— A4. Information Architecture — Site Map

The architecture maps directly to the four layers. Every page answers the governing question.

#	PAGE	URL	LAYER	GOVERNING QUESTION ANSWERED
1	Home	/	All four	"Who is ThinkingHead and why should I care?"
2	About	/about	Layer 1: Belief	"What does this company believe about the world?"
3	Services	/services	Layers 1–2	"What can they actually do, and how do they frame it?"
4	Method	/method	Layer 2: Thinking	"How do they work, and is it disciplined?"
5	Work	/work	Layer 3: Built	"What have they actually shipped, and did it work?"
6	Insights	/insights	Layer 4: Knowledge	"What do they know that I don't? Are they teaching me something?"
7	Leadership	/leadership	Layers 1–2	"Who are these people and can I trust them?"
8	Let's Talk	/contact	Conversion	"I'm ready. How do I start?"

Navigation

Primary nav: About · Services · Method · Work · Insights · Leadership · [Button] Let's Talk

Behaviour: Sticky on scroll. The "Let's Talk" button is always visible — teal fill, gold text, never competes with content but never disappears. Mobile: hamburger with full-screen overlay.

Logo: Lightbulb-brain mark + "THINKINGHEAD" wordmark, left-aligned. Links to home.

— A5. Design System — Visual Expression

Core principle

The site should feel like a senior partner walking into a room — calm, confident, prepared, unhurried. Not a pitch deck flying at you. Not a startup's landing page screaming for attention. Quiet authority.

Palette

ROLE	HEX	USAGE
Primary	#2E6B5C	Headings, nav, CTAs, accent lines, logo. The colour of thinking.
Accent	#D2AB67	Taglines, secondary CTAs, outcome statements, the "what you receive" moments.
Background	#F5EDDD	Page background for body pages. Warmth without distraction.
Text	#2D2D2D	Body copy. Never pure black — too harsh on cream.
White	#FFFFFF	Cards, modals, contrast sections.

Typography

Headings: Serif (Playfair Display, Georgia, or DM Serif). The serif says "consulting firm" — thoughtfulness, permanence, intellectual weight.

Body: Clean sans-serif (Inter, DM Sans, or Source Sans 3). Readability, modernity, technical clarity.

Monospace accent: JetBrains Mono or IBM Plex Mono for method step numbers, section labels, reference codes. Signals engineering discipline.

Imagery & Visual Language

- No stock photography. Period.
- The lightbulb-brain logo mark is the primary graphic motif — used as watermark, section divider, loading state.
- Abstract geometric patterns in the brand palette for section backgrounds.
- If photography is ever used, it must be original: real ThinkingHead work, real Kaduna, real people (with consent).
- Data visualisations and diagrams are content, not decoration. If a diagram appears, it must teach something.

Motion

- Subtle scroll-triggered fade-ins (200ms, ease-out). Nothing bounces, slides, or zooms.
- No parallax. No auto-playing video. No animation that delays content visibility by even 100ms.
- Hover states on cards: gentle lift (4px shadow) + teal accent line reveal. That's it.

Reference sites (tone, not copy)

Zoe Ventures — clean, minimal, credibility-forward. The restraint is the design.

McKinsey Digital — authority without arrogance. The content does the work, not the layout.

Linear — engineering clarity. Every pixel earns its place.

Stripe — technical depth expressed with visual calm.

— A6. Functional & Technical Requirements

FR-01 Discovery Call Form. Fields: Name, Organisation, Role, Email, Phone, “What’s the challenge?” (textarea). Submit triggers email to thinkingheadng@gmail.com + WhatsApp notification. No CAPTCHA — use honeypot + rate limiting. Confirmation: “We’ve received your message. You’ll hear from Ben within 24 hours.”

FR-02 Corporate Profile Download. Gated: name + email + organisation to download the 16-page PDF. Lead data stored and forwarded.

FR-03 Insights Publishing. Markdown-based content system for research notes, frameworks and perspectives. Each insight gets: title, date, author (Ben or Ayo), reading time, category tag, and share links. No comments section — this is a publication, not a blog.

FR-04 Performance. Lighthouse 95+ on all four metrics. First Contentful Paint <1.2s on 4G. Total page weight <500KB for any page. Images: WebP, lazy-loaded, responsive srcset.

FR-05 Architecture. Static site generator (Next.js App Router or Astro). Deployed to Vercel or Cloudflare Pages. No WordPress. Content via Contentlayer, MDX, or Sanity. The site is code, not a CMS template.

FR-06 SEO. Semantic HTML5. Open Graph + Twitter Card meta per page. JSON-LD structured data (Organization, LocalBusiness, Article for insights). XML sitemap. Canonical URLs. Nigerian hreflang.

FR-07 Analytics. GA4 with conversion events: discovery call submission, profile download, insight read (>60s on page), scroll depth >75%. Microsoft Clarity for heatmaps.

FR-08 Security. HTTPS enforced. HSTS, CSP, X-Frame-Options headers. No third-party scripts except analytics. Form endpoint rate-limited.

FR-09 Domain. thinkinghead.ng (primary). Professional email: hello@thinkinghead.ng, ben@thinkinghead.ng. Gmail remains operational behind the scenes.

Part B: Page Content Architecture

Every section below includes: the section's purpose, its connection to the four layers, production-ready copy, design notes, and button/CTA specifications.

Page 1: Home

URL: / | Layers: All four | Governing question: "Who is ThinkingHead and why should I care?"

HERO — The Opening Statement

We turn complex challenges into working systems.

AI-powered research, strategy and engineering — from Kaduna, Nigeria, for the organisations shaping Africa's future.

[Primary CTA — teal button, gold text] **Let's Talk**

[Secondary CTA — text link with arrow] See how we work →

Design note: The hero is text-only. No image, no video, no illustration. The words are the authority. Large serif heading, generous white space, cream background. The logo mark can sit as a subtle watermark behind the text.

SECTION 2 — The Standard (Layer 1: Belief)

Consulting-grade insight. Enterprise-grade delivery.

Every engagement meets a single standard: the strategy must be defensible, the technology must be production-ready, and the outcome must be measurable.

Three-column card layout:

Defensible strategy — Every recommendation backed by evidence you can examine, challenge and defend to your own stakeholders.

Production-ready technology — We build to run. Secured, tested, maintainable long after launch. Not demos. Not prototypes. Systems.

Measurable outcomes — We agree what success looks like at the start and report against it at the end.

SECTION 3 — What We Do (Layer 1-2: Belief + Thinking)

Eight service pillars. One accountable partner.

2x4 card grid. Each card: teal icon, pillar name, one-line outcome statement, hover reveals a "See more →" link to /services#anchor.

Research, Strategy & Advisory — Decisions backed by evidence, not opinions.

Digital Transformation — Organisations that use the technology — not reports that describe it.

AI Strategy & Transformation — AI that earns its keep — measured in outcomes, not demos.

Product Discovery & Development — To market faster, with something users actually want.

Custom Software & Business Systems — Software that does what your organisation does — and keeps working.

Business Process Automation — Hours back, costs down, reporting that writes itself.

Technology Consulting & R&D — A technology direction you trust — and the partner to execute it.

Digital Capacity & Capability — A team that owns the tools — not a dependency on the vendor.

SECTION 4 — How We Work (Layer 2: Thinking)

Eight steps. One partner. Delivery you can watch.

Horizontal pipeline visual: eight numbered steps connected by a thin teal line. Each step is a monospace-numbered circle. Below the pipeline, one sentence:

Every engagement — from a focused research sprint to a multi-phase build — runs through the same eight steps. The work is disciplined. You are informed at every stage.

[CTA — text link] [See the method in detail → /method](/method)

SECTION 5 — The Work (Layer 3: Built)

The method, made real.

Three featured project cards. Stacked vertically on mobile, horizontal on desktop. Each card: project name, sector tag (gold), two-sentence description, “Read the story →” link.

Featured: LinguaRoots (AI + Language Preservation), ChurchFlow/IFMRS (Church Administration + Finance), Enterprise Transformation (Education + Enterprise).

[CTA] [See all work → /work](/work)

SECTION 6 — From Our Thinking (Layer 4: Knowledge)

This section previews the two most recent Insights. Each preview: title, date, reading time, first two sentences, “Read →” link. This section only appears once the Insights section has content — never show an empty shelf.

SECTION 7 — Closing CTA

Let’s build something that works.

Tell us what isn’t working, what you want to achieve, and what’s been tried before. We’ll tell you honestly what we’d do differently — and what we’d do first.

[Button — full-width teal bar] [Start a conversation](#)

Page 2: About

URL: /about | Layer 1: Belief | Governing question: "What does this company believe about the world?"

HERO

An AI-powered partner for the organisations shaping Africa's future.

ThinkingHead is an AI-powered research, strategy and digital transformation company headquartered in Kaduna, Nigeria. We help governments, enterprises, development partners and mission-led organisations turn complex challenges into working systems — through deep research, systems thinking, artificial intelligence and disciplined engineering.

SECTION 2 — Identity Statement

We are researchers who build. Strategists who ship. Engineers who stay until the system works.

Most firms stop at the recommendation. We arrive with the plan and the capacity to ship it. We don't call an engagement done until the system is live, your people are trained, and you can run it yourself. That is the difference between a vendor and a partner.

SECTION 3 — What We Believe (Worldview)

This section is new — not in the corporate profile. It is the intellectual foundation of the About page, expressing ThinkingHead's worldview:

On systems: Every organisation is a system. When something isn't working, the cause is almost never where the symptom appears. We trace problems to their roots — across processes, people, incentives and technology — before we touch a single line of code.

On technology: Technology is a tool, not a strategy. The right system, deployed into the right process, with the right people trained on it, changes outcomes. Technology deployed into chaos just digitises the chaos.

On AI: AI is engineering, not magic. We use it where it changes outcomes — and skip where it doesn't. When you hear a number from us, it comes from analysis you can check.

On Africa: The operating conditions here — variable power, evolving regulation, cash and mobile money side by side, users on three-year-old phones — are not limitations. They are the design constraints that make our systems more resilient, more practical, and more honest than systems designed for ideal conditions.

On accountability: We do not write reports that sit on shelves. We do not hand off to strangers mid-project. The person who scopes the work is the person who owns the outcome. That is the only model that keeps everyone honest.

SECTION 4 — Vision & Mission

Our Vision: Africa's trusted partner in transformation. To become Africa's trusted partner for transforming ideas, organisations and societies through research, innovation and intelligent technologies that create lasting impact.

Our Mission: We partner with governments, businesses, development organisations and communities to solve complex challenges through strategic research, systems thinking, AI and digital innovation — enabling sustainable growth and empowering possibilities.

SECTION 5 — Why ThinkingHead (Eight Differentiators)

2x4 card grid with icons. Content from corporate profile pages 5–6: AI-First Consulting, Systems Thinking, Deep Research, Product Strategy, Enterprise Technology, African Context, Global Standards, Practical Delivery. Each card: icon, name, full paragraph.

SECTION 6 — Registration & Institutional Data

ThinkingHead Nigeria Limited · RC 8611016 · Incorporated under CAMA 2020 · Corporate Affairs Commission, Nigeria · Kaduna, Nigeria

[\[Button\] Download Corporate Profile \(links to gated download\)](#)

Page 3: Services

URL: /services | Layers 1-2 | Governing question: "What can they do, and how do they frame it?"

HERO

Eight service pillars. One accountable partner.

Our service architecture covers the full journey — from research and strategy to production systems, automation and capability transfer. Start where it hurts. We'll show you how the other pillars connect.

Each pillar renders as a full-width section with anchor ID. Structure per pillar:

- Pillar number (monospace, gold) + name (serif heading)
- Description paragraph (from corporate profile)
- Sub-service bullet list
- Outcome statement in gold italic: "You get..."

Content: verbatim from corporate profile pages 10–11 (all eight pillars).

[End-of-page CTA] The pillars work together. Let's find where to start. [Button] Start a conversation

Page 4: Method

URL: /method | Layer 2: Thinking | Governing question: "How do they work, and is it disciplined?"

HERO

An eight-step methodology from insight to scale.

Every engagement runs through the same eight steps. It keeps the work disciplined and keeps you informed at every stage. One accountable partner carries the engagement from start to finish.

METHOD DISPLAY

Vertical timeline or expandable accordion. Each step:

- Step number in monospace (01-08)
- Step name as serif heading
- Description paragraph
- "You receive:" line in gold italic

Content: verbatim from corporate profile pages 8-9.

Closing line: "Eight steps. One partner. Delivery you can watch."

[CTA] Ready to start? [Button] Let's talk

Page 5: Work

URL: /work | Layer 3: Built | Governing question: "What have they shipped, and did it work?"

HERO

Signature projects — the method, made real.

Every project went through our eight-step method: research first, then design, then a working system — delivered, deployed and measured.

PROJECT CARDS

Full-width cards, each containing:

- Project name (serif heading)
- Sector tags (gold, monospace)
- Description (from corporate profile page 12)
- [Future] A "Read the full story →" link to a dedicated case study page

Projects: *LinguaRoots, ChurchFlow/IFMRS, Crowdfunding Platform, Enterprise Transformation, MSME Opportunity Intelligence.*

INDUSTRIES SERVED

Three-cluster grid from corporate profile page 13: Public Institutions & Development, Enterprise & Commerce, Institutions & Communities. Each cluster lists its sectors.

Closing: *"If you'd like to discuss any of this work in more depth, we'd welcome the conversation — subject to the confidentiality we keep for our clients."*

Page 6: Insights

URL: /insights | Layer 4: Knowledge | Governing question: "What do they know that I don't?"

PURPOSE

This is the most important differentiator page. It positions ThinkingHead as a thinking institution — a firm that publishes its intellectual capital, not just its service list. This is where Layer 4 lives.

CONTENT TYPES

Research Notes — Original research findings, structured for executive decision-making. These are the outputs of actual ThinkingHead research engagements (anonymised where needed).

Frameworks — Reusable thinking tools ThinkingHead has developed. A framework is a lens — a way of seeing a problem that helps someone else see it too.

Perspectives — Short, opinionated pieces on technology, AI, African markets, systems design, or institutional transformation. These are ThinkingHead's point of view — direct, evidence-backed, unafraid to disagree with consensus.

PAGE LAYOUT

- Category filter tabs: All • Research • Frameworks • Perspectives
- Card grid: title, date, author, reading time, category tag, first two sentences
- Individual insight page: clean reading layout (max 680px content width), author attribution, share links, related insights
- No comments. No reactions. This is a publication, not social media.

INITIAL CONTENT RECOMMENDATIONS

Launch with 3–4 insights to demonstrate depth. Suggested inaugural pieces:

1. "Why most digital transformation fails in Nigerian institutions" — a perspective based on ThinkingHead's real diagnostic work.
2. "The ThinkingHead dual-scale payroll architecture" — a technical framework for running two salary scales in one payroll cycle (anonymised from the ECWA work).
3. "MSME opportunity intelligence: where the data says the market is" — a research note from the Africa MSME research.
4. "AI for African institutions: what works, what doesn't, and what to try first" — a perspective grounded in actual deployments.

Page 7: Leadership

URL: /leadership | Layers 1-2 | Governing question: "Who are these people and can I trust them?"

HERO

Two founders. One standard: build it properly.

BEN SHEKARI — Founder & CEO

Content from corporate profile page 15. Photo: professional headshot (to be taken). Display alongside bio, left-aligned.

Ben brings almost a decade of frontier product and technology experience from Marco Focus Nigeria Limited — one of Northern Nigeria's pioneering software development companies — where he led the design and delivery of enterprise systems across multiple sectors. At ThinkingHead he leads strategy, AI product direction, executive research and client engagement. His practice combines systems thinking, deep research and AI engineering — helping clients move from ambition to defensible, working systems. He leads client engagement personally, from first question to final handover.

AYODEJI OLANIYAN — CTO

Content from corporate profile page 15. Photo: professional headshot (to be taken).

Ayo brings 15+ years of enterprise technology leadership from three of Nigeria's tier-one financial institutions — Zenith Bank, UBA and Wema Bank — where he delivered mission-critical systems at national scale. At ThinkingHead he leads the engineering practice across enterprise architecture, cloud, cybersecurity, DevOps and digital transformation. His standard is the one regulated industries demand: reliability, security and governance, built in from the start.

Closing: "We do the thinking and the building — and we stand behind both."

Page 8: Let's Talk

URL: /contact | Conversion | Governing question: "I'm ready. How do I start?"

HERO

Let's talk.

Tell us what isn't working, what you want to achieve, and what's been tried before.

We'll tell you honestly what we'd do differently — and what we'd do first. If the challenge is a fit, we scope it properly. If it isn't, we'll tell you that too.

HOW OUR FIRST CONVERSATION GOES

Three-column layout (matching corporate profile page 16):

01 You tell us what isn't working, what you want to achieve, and what's been tried before.

02 We'll tell you honestly what we'd do differently — and what we'd do first.

03 If the challenge is a fit, we scope it properly. If it isn't, we'll tell you that too.

FORM

Fields: Name | Organisation | Role | Email | Phone | "What's the challenge?" (textarea)

[Submit button — full-width teal] Start a conversation
