THINKINGHEAD NIGERIA LIMITED

RC 8611016 · thinkingheadng@gmail.com · +234 706 834 9172

5 Pipeline Road, Bayan Dutse, Kaduna, Nigeria

Part A: Business Requirements Document

This document defines the business requirements, information architecture, functional scope, and content strategy for the ThinkingHead Nigeria Limited corporate website.

— 1. Project Overview

Project: ThinkingHead Corporate Website (thinkinghead.ng or thinkingheadng.com)

Owner: Benjamin I. Shekari, CEO, ThinkingHead Nigeria Limited

Document version: 1.0 — September 2026

Purpose: Build a modern, conversion-oriented corporate website that positions ThinkingHead as Africa's trusted partner for AI-powered research, strategy, and digital transformation — and converts executive visitors into discovery conversations.

— 2. Business Objectives

BO-1 Credibility at first glance. An executive, board member, or procurement officer who lands on the site must immediately understand that ThinkingHead is a serious, credible firm — not a freelancer with a logo. The design, copy, and structure must communicate global-quality thinking delivered from a permanent Nigerian presence.

BO-2 Lead generation. Every page must have a clear path to a conversation. The primary conversion is a discovery call request (not a generic contact form). Secondary conversion is a downloadable asset (corporate profile PDF, case study) that captures contact information.

BO-3 Service clarity. A visitor must be able to understand what ThinkingHead does, how it works, and what outcomes it delivers within 60 seconds of landing on any page.

BO-4 Differentiation. The site must make the ThinkingHead difference obvious: AI-first consulting, research-backed strategy, Nigerian-built enterprise systems, and a hybrid commercial model that shares risk with clients.

BO-5 Talent attraction. The site should signal to senior engineers and strategists that ThinkingHead is a place where serious people do serious work.

— 3. Target Audiences

AUDIENCE	WHO THEY ARE	WHAT THEY NEED FROM THE SITE
Primary	C-suite executives, board members, GMs at Nigerian enterprises, government MDAs, and international development organisations	Credibility signals, service scope, evidence of delivery, a fast path to a conversation
Secondary	Procurement/vendor-assessment officers at corporates, NGOs, and public institutions	Company registration, capability statement, track record, downloadable profile
Tertiary	Startup founders, tech leaders, potential hires, partner organisations (e.g. Zoe Ventures)	Technical credibility, culture signals, partnership model, product work

— 4. Information Architecture & Sitemap

The site follows a flat, conversion-oriented architecture. No page is more than two clicks from a discovery call CTA.

#	PAGE	URL SLUG	PURPOSE
1	Home	/	First impression, positioning statement, service overview, social proof, CTA
2	About	/about	Story, vision, mission, registration, why-us differentiators
3	Services	/services	Eight service pillars with descriptions and outcomes
4	Method	/method	Eight-step methodology — how every engagement runs
5	Work	/work	Signature projects, industries served, outcomes delivered
6	Leadership	/leadership	Founder bios, credentials, personal credibility
7	Contact	/contact	Discovery call form, email, phone, address, map
8	Corporate Profile	/profile	Downloadable PDF (gated with email capture)

— 5. Functional Requirements

5.1 Core Functional Requirements

FR-01 Discovery Call CTA. A persistent “Let’s Talk” button in the navigation and a discovery-call form on the Contact page. Form fields: name, organisation, role, email, phone, “What’s the challenge?” (free text). Submissions trigger an email to thinkingheadng@gmail.com and a Slack/WhatsApp notification to Ben.

FR-02 Corporate Profile Download. A gated download: visitor enters name, email, and organisation to receive the corporate profile PDF. Captured leads are stored and forwarded to the team.

FR-03 Responsive Design. Fully responsive across desktop, tablet, and mobile. Primary mobile breakpoint: 375px. The site must load and look excellent on a 3-year-old Android phone over a 3G connection — this is the African operating reality.

FR-04 Performance. Target Lighthouse score: 90+ on Performance, Accessibility, Best Practices, and SEO. First Contentful Paint under 1.5s on 4G. No hero videos that block load. Images served as WebP with lazy loading.

FR-05 SEO Foundation. Semantic HTML, Open Graph and Twitter Card meta, structured data (Organization, LocalBusiness), XML sitemap, robots.txt. Each page gets a unique meta title and description.

FR-06 Analytics. Google Analytics 4 with conversion events for: discovery call submission, profile download, page scroll depth >75%. Microsoft Clarity for heatmaps and session replay.

FR-07 CMS or Static. Recommended: static site (Next.js or Astro) deployed to Vercel or Cloudflare Pages. Content changes are infrequent and can go through a simple markdown/JSON content layer. No WordPress — the attack surface and maintenance burden are not justified for a 7-page site.

FR-08 SSL & Security. HTTPS enforced. HSTS headers. CSP headers. No third-party scripts except analytics. Contact form protected with honeypot + rate limiting (no reCAPTCHA — it slows mobile users).

5.2 Design Direction

Brand palette: Dark teal (#2E6B5C), gold (#D2AB67), cream (#F5EDDD), dark text (#2D2D2D). White space is a first-class design element.

Typography: Serif for headings (Georgia or a premium web serif like Playfair Display), clean sans-serif for body (Inter, DM Sans, or Calibri web fallback). The serif/sans pairing signals “consulting firm” not “tech startup.”

Imagery: No stock photos of people shaking hands. Use the lightbulb-brain logo mark as a graphic motif. Abstract geometric patterns in the brand palette. If photography is used, it must be original — real ThinkingHead work, real Kaduna, real clients (with permission).

Motion: Subtle scroll-triggered reveals. No parallax. No animations that delay content visibility. The site should feel calm, confident, and fast — like a senior partner walking into a room, not a pitch deck flying at you.

Reference tone: Zoe Ventures (clean, minimal, credibility-forward), McKinsey Digital (authority without arrogance), Linear (engineering clarity).

— 6. Non-Functional Requirements

NFR-01 Hosting: CDN-backed global delivery (Vercel, Cloudflare, or Netlify). Nigerian visitors should hit an edge node in Lagos or Johannesburg, not Virginia.

NFR-02 Uptime: 99.9% — trivially achievable with a static site on a global CDN.

NFR-03 Maintenance: Content updates via Git commits or a lightweight headless CMS (Contentlayer, Sanity, or Keystatic). No dependency on a developer for copy changes.

NFR-04 Domain: thinkinghead.ng (preferred) or thinkingheadng.com. Nigerian .ng domain signals local presence. Redirect the other to the primary.

NFR-05 Email: Professional email (hello@thinkinghead.ng, ben@thinkinghead.ng) — not Gmail on the live site. Gmail remains operational; the domain email forwards.

Part B: Page Content Specification

The following pages contain production-ready copy for every section of every page. Section labels (HERO, SECTION 2, etc.) map to design blocks. All copy is written in the ThinkingHead voice: direct, confident, evidence-forward, no jargon, no filler.

Page 1: Home

URL: / | Purpose: First impression, positioning, credibility, conversion

HERO

We turn complex challenges into working systems.

ThinkingHead is an AI-powered research, strategy and engineering firm headquartered in Kaduna, Nigeria. We partner with governments, enterprises and mission-led organisations to build systems that last — through deep research, systems thinking, and disciplined delivery.

[CTA Button] [Let's Talk](#) · [Secondary CTA] [Download Corporate Profile](#)

SECTION 2: The Standard

Consulting-grade insight. Enterprise-grade delivery.

Every engagement we take on meets a single standard: the strategy must be defensible, the technology must be production-ready, and the outcome must be measurable. That standard is why executives and boards work with us as a trusted partner — not just another vendor.

SECTION 3: What We Do (Service Pillars — summary cards)

Eight service pillars. One accountable partner.

Display as a 2×4 or 4×2 card grid. Each card: icon, pillar name, one-line description, “Learn more →” link to </services#pillar-anchor>.

Research, Strategy & Advisory — Decisions backed by evidence, not opinions.

Digital Transformation — Organisations that use the technology — not reports that describe it.

AI Strategy & Transformation — AI that earns its keep — measured in outcomes, not demos.

Product Discovery & Development — To market faster, with something users actually want.

Custom Software & Business Systems — Software that does what your organisation does — and keeps working.

Business Process Automation — Hours back, costs down, reporting that writes itself.

Technology Consulting & R&D — A technology direction you trust — and the partner to execute it.

Digital Capacity & Capability Development — A team that owns the tools — not a dependency on the vendor.

SECTION 4: How We Work (Method teaser)

Eight steps. One partner. Delivery you can watch.

Every engagement runs through the same disciplined method — from discovery to scale. You see the work at every stage. Nothing surprises you at the end.

Display the 8-step pipeline as a horizontal visual: Discover → Research → Analyse → Design → Build → Deploy → Measure → Scale.

[CTA] [See our method → /method](#)

SECTION 5: Track Record (Social proof)

The method, made real.

Display 3–4 signature project cards. Each card: project name, one-sentence outcome, “Read more →”. Pull from: [LinguaRoots](#), [ChurchFlow/IFMRS](#), [Crowdfunding Platform](#), [Enterprise Transformation](#).

SECTION 6: Industries

The challenges differ by sector. The standard doesn’t.

Icon grid of industry badges: [Government](#) · [Financial Services](#) · [Education](#) · [Healthcare](#) · [Religious Organisations](#) · [Agriculture](#) · [MSMEs](#) · [Startups](#) · [Development Partners](#) · [Manufacturing](#) · [Cooperatives](#) · [NGOs](#)

SECTION 7: CTA Banner

Let’s build something that works.

Tell us what isn’t working, what you want to achieve, and what’s been tried before. We’ll tell you honestly what we’d do differently — and what we’d do first.

[CTA Button] [Start a conversation](#)

Page 2: About

URL: /about | Purpose: Story, identity, differentiation, credibility

HERO

An AI-powered partner for the organisations shaping Africa's future.

ThinkingHead is an AI-powered research, strategy and digital transformation company headquartered in Kaduna, Nigeria. We help governments, enterprises, development partners and mission-led organisations turn complex challenges into working systems — through deep research, systems thinking, artificial intelligence and disciplined engineering.

SECTION 2: Identity

We are researchers who build. Strategists who ship. Engineers who stay until the system works.

Most firms stop at the recommendation. We arrive with the plan and the capacity to ship it. We don't call an engagement done until the system is live, your people are trained, and you can run it yourself. That is the difference between a vendor and a partner.

SECTION 3: Vision & Mission

Our Vision: Africa's trusted partner in transformation. To become Africa's trusted partner for transforming ideas, organisations and societies through research, innovation and intelligent technologies that create lasting impact.

Our Mission: We partner with governments, businesses, development organisations and communities to solve complex challenges through strategic research, systems thinking, AI and digital innovation — enabling sustainable growth and empowering possibilities.

SECTION 4: Eight Reasons (Why ThinkingHead)

Display as 2x4 card grid with icons, matching corporate profile pages 5–6:

AI-First Consulting: Every recommendation grounded in AI-augmented research, modelling and delivery. We use AI where it changes outcomes — not where it just sounds good.

Systems Thinking: We diagnose the whole system — not the symptom — before proposing an intervention.

Deep Research: Consultant-grade primary and secondary research, structured for executive decision-making.

Product Strategy: From opportunity discovery to launch, we shape products that survive first contact with the market.

Enterprise Technology: Cloud, data, cybersecurity and platform engineering delivered to enterprise standards.

African Context: Deep operational understanding of Nigerian and African market realities, users and institutions.

Global Standards: Deliverables benchmarked against the quality bar of the world's top strategy and technology firms.

Practical Delivery: We build, deploy and hand over working systems. A report can sit on a shelf; we arrive with the capacity to ship.

SECTION 5: Corporate Registration

ThinkingHead Nigeria Limited. Registered with the Corporate Affairs Commission (CAC), Nigeria — RC 8611016 — incorporated under the Companies and Allied Matters Act (CAMA) 2020. Headquartered in Kaduna, Nigeria.

Page 3: Services

URL: /services | Purpose: Detailed service pillars with outcomes

HERO

Eight service pillars. One accountable partner.

Our service architecture covers the full journey — from research and strategy to production systems, automation and capability transfer. Start where it hurts. We'll show you how the other pillars connect.

Each pillar is a full-width section with: pillar number, name, description paragraph, bullet list of sub-services, and a gold italic outcome statement. Content mirrors corporate profile pages 10–11 exactly. Anchor IDs: #research, #transformation, #ai, #product, #software, #automation, #consulting, #capability.

[End-of-page CTA] The pillars work together. Let's find where to start. [Button] Start a conversation

Page 4: Method

URL: /method | Purpose: Process transparency, credibility through discipline

HERO

An eight-step methodology from insight to scale.

Every engagement — from a focused research sprint to a multi-phase build — runs through the same eight steps. It keeps the work disciplined and keeps you informed at every stage.

Display the 8 steps as an interactive vertical timeline or accordion. Each step expands to show:

01 Discover

We sit with your people and listen. Stakeholders, users, front-line staff, decision-makers — we map how the organisation actually works today, and where it hurts.

You receive: *An honest, shared framing of the problem — agreed by everyone who will live with the result.*

02 Research

We gather the evidence. Market data, user interviews, comparable cases, regulatory and technical constraints. Nothing is assumed; everything is checked.

You receive: *An evidence base your decisions can stand on — and that you can cite later.*

03 Analyse

We turn evidence into insight. Systems analysis, opportunity modelling, cost and risk. We test each option against your reality.

You receive: *A clear diagnosis and a shortlist of defensible options, with trade-offs stated plainly.*

04 Design

We decide, then blueprint. Architecture, product design, roadmap, phasing, budgets — specific enough to build from, simple enough to explain to a board.

You receive: *A build plan you can approve with confidence.*

05 Build

We ship in working increments, not one big reveal. You see the system take shape, test it as it grows.

You receive: *Working software you have already touched, tested and approved.*

06 Deploy

We take it live properly — migration, rollout, training, support.

You receive: *A live system running in your environment, with your people trained on it.*

07 Measure

We agreed success criteria in step one. Now we report against them.

You receive: *Evidence of what changed, and a clear view of what's left.*

08 Scale

We grow what works. More users, more locations, more automation — and capability transferred to your team.

You receive: *A system you can run, extend and own.*

Eight steps. One partner. Delivery you can watch.

Page 5: Work

URL: /work | Purpose: Evidence of delivery, social proof

HERO

Signature projects — the method, made real.

Every project below went through our eight-step method: research first, then design, then a working system — delivered, deployed and measured. Nothing here is boilerplate.

PROJECT CARDS

Display as full-width cards with project name, sector tag, description, and outcome. Content:

LinguaRoots

Language Preservation · AI

An AI-powered platform for the preservation, teaching and revitalisation of indigenous African languages. It gives communities the tools to document their languages, teach them to the next generation, and keep them alive in daily use. Technology in service of heritage.

ChurchFlow / IFMRS

Church Administration · Financial Management

An integrated digital administration and financial management ecosystem for church and ministry networks. Administration and finances work from one trusted system, giving leadership the order and accountability that stewardship demands.

Crowdfunding Platform

Donor Trust · International

A crowdfunding platform for an international faith-based organisation, built around global donor and beneficiary workflows. Giving and disbursement through one controlled system, engineered for the accountability that donor trust depends on.

Enterprise Transformation

Education · Enterprise

Digital transformation and consulting for academic institutions and enterprise organisations across Nigeria — diagnosing how each organisation actually worked before digitising what mattered most.

MSME Opportunity Intelligence

Research · Africa

Consultant-grade AI and MSME opportunity intelligence for Nigeria and Africa. Research that maps where real market opportunity sits for small businesses, structured for decision-makers who need evidence, not opinions.

INDUSTRIES GRID

Below the project cards, display the industry grid from corporate profile page 13: Public Institutions & Development, Enterprise & Commerce, Institutions & Communities — with the sector list under each cluster.

Page 6: Leadership

URL: /leadership | Purpose: Personal credibility, human connection

HERO

Two founders. One standard: build it properly.

Companies are built by people — and the people matter most at the top.

BEN SHEKARI

Founder & Chief Executive Officer

Ben brings almost a decade of frontier product and technology experience from Marco Focus Nigeria Limited — one of Northern Nigeria's pioneering software development companies — where he led the design and delivery of enterprise systems across multiple sectors. At ThinkingHead he leads strategy, AI product direction, executive research and client engagement. His practice combines system thinking, deep research and AI engineering — helping clients move from ambition to defensible, working systems. He leads client engagement personally, from first question to final handover.

AYODEJI OLANIYAN

Chief Technology Officer

Ayo brings 15+ years of enterprise technology leadership from three of Nigeria's tier-one financial institutions — Zenith Bank, UBA and Wema Bank — where he delivered mission-critical systems at national scale. At ThinkingHead he leads the engineering practice across enterprise architecture, cloud, cybersecurity, DevOps and digital transformation. His standard is the one regulated industries demand: reliability, security and governance, built in from the start.

We do the thinking and the building — and we stand behind both.

Page 7: Contact / Let's Talk

URL: /contact | Purpose: Conversion — start a discovery conversation

HERO

Let's talk.

Tell us what isn't working, what you want to achieve, and what's been tried before. We'll tell you honestly what we'd do differently — and what we'd do first. If the challenge is a fit, we scope it properly. If it isn't, we'll tell you that too.
